[web projects]

2018 - present

## City Sites

A platform geared towards Flemish municipal governments based on Drupal 8. The CMS allows municipal employees to manage services and the products offered by their municipality, as well as councils and their composition, sessions, agenda and decisions, alongside job offerings and news items. The main navigation is built around themes like "leisure", "housing" or "well-being", which in turn can have an indefinite number of sub-themes. These themes can then be associated with basic pages, products and councils. Products can be automatically imported from the IPDC, the product catalogue offered by the Flemish government. Cultural and other activities taking place within the municipality are disclosed via the UIT database. All of the platform's deployments share the same codebase, allowing for fast and centralized updates, while still allowing each municipality to have their own customized look and feel.

**Keywords:** Drupal 8, Drupal distributions, module & theme development, Migrate API, MySQL

2018 - present

## CMS Antwerp Museum App

A “headless” CMS based on Drupal 7 and serving as backend for the Antwerp Museum App. This is a touristic mobile application offered by the City of Antwerp, allowing visitors to discover Antwerp’s cultural highlights by means of tours along certain points of interest (POIs). Museums, tours and POIs are all managed from within the CMS, which delivers its data to the app by means of a custom JSON API.

**Keywords:** Drupal 7, decoupled Drupal, module development, multilingual, JSON API, MySQL

2018 - present

## CMS Wow Region

A “headless” CMS based on Drupal 7 and serving as backend for a touristic mobile application which allows visitors to discover a region by following tours along certain points of interest (POIs) either by car, bicycle or motorbike. The CMS gathers the routing information between POIs from a geoserver. The CMS's main client can put the CMS at the disposition of agencies, allowing them to manage their own tours and POIs from within the CMS.

**Keywords:** Drupal 7, decoupled Drupal, module development, multilingual, multitenant, JSON API, MySQL

2018 - present

## Website Antwerp Museum App

Promotional website for the Antwerp Museum App built with Angular JS, providing visitors with a preview of the app's content. The website fetches data from the JSON API provided by the CMS.

**Keywords:** Angular, JSON API

2017

### **Mealplanner**

A web application built with the Symfony framework that allows users to administer all their personal recipes in one central repository, create reusable menus on the fly, and generate their grocery lists from these menus and/or from individual recipes, ordered by department.

**Keywords:** Symfony Twig jQuery Bootstrap

2012 - 2017

### **Intranet**

An intranet for the council employees of the municipality of Wemmel. The first version, launched in 2012, was based on Open Atrium 1, a Drupal 6 'distribution' aimed at improving collaboration and communication in teams. Apart from the built-in features, two custom features were developed (Telephone Book and Support Tickets). 2015 saw the upgrade to Open Atrium 2 and all content was migrated using a custom Migrate module. The upgrade to OA version 2.60 significantly improved the user experience. A new corporate design was introduced around the middle of 2016.

**Keywords:** Drupal7 MySQL

2013 - 2016

### **YouthTube**

A bilingual (Dutch-French) website aimed at promoting the annual Youth Day in Wemmel, launched in 2013 and 'reused' for the 2014, 2015 and 2016 editions. Originally written in 'plain' PHP coupled with a MySQL database, the source code was refactored within the Symfony framework in 2016. On top of that, the site layout became responsive and site editors were given the ability to create and edit content.

**Keywords:** Symfony Twig Bootstrap MySQL

2013 - 2016

### **Extranet**

An extranet for the members of the council of Wemmel, launched in 2013 on the same platform as the intranet (Open Atrium). The integration of Solr made it possible to search for terms within documents. In 2015 the local councillors of the OCMW of Wemmel also joined the platform.
